Via Torino 155 - Venezia Mestre

WATER - The strangest liquid

A film by Mikael Agaton and Annika Dopping

AGATON FILM production, Sweden, 2021 / 58'

This documentary reveals stunning and groundbreaking discoveries about the most vital of substances, the one that constitutes most of ourselves: **water**. In this film the Swedish professor in physics at Stanford and Stockholm **Anders Nilsson** and his team of dedicated researchers enter the world of molecules and atoms

under extreme conditions, and insist on designing and pursuing an experiment that nobody has considered possible. We follow their scientific journey from the hypothesis of two liquids from **Prof. Francesco Sciortino** towards the ultimate answer to why we are here at all: **why life can exist on the planet.**
